Welcome to Moxa’s NPort Express, a compact palm-sized communications device that allows you to control RS-232/422/485 serial devices over a TCP/IP Ethernet.

The following topics are covered in this chapter:

- **Features**
- **Product Specifications**
- **Package Checklist**
- **Front/Top/Rear/Bottom Panel Views**
The NPort Express DE-311 provides a data communications solution for connecting Windows and Linux hosts to asynchronous serial devices over a TCP/IP Ethernet network. Using the NPort Express is like adding a serial port to your PC using a serial board, but with the added advantage of the TCP/IP network. With the NPort Express, Windows hosts can connect to a native serial port and PC-based Linux hosts can connect to a real tty port, all over a network. Virtually any serial device can be attached to the NPort Express to become network accessible, and the network can be configured to allow control of the device from any location in the world.

After driver installation, Windows will recognize the serial port on the NPort Express as a real COM port; Linux will recognize the port as a real tty port. The NPort Express provides basic transmit/receive data functions, as well as RTS, CTS, DTR, DSR, and DCD control signals.

The NPort Express can be used with your existing applications and comes with a software utility and maintenance wizard.

**Features**

- 3-in-1 RS-232/422/485 serial interface
- Auto-detecting 10/100 Mbps Ethernet connection
- Built-in Ethernet and TCP/IP protocol
- Compact size for easy integration
- Supports MAC based IP configuration
- Supports configuration store and copy for easy deployment
- Supports Windows Real COM drivers and Linux real TTY drivers
- Operation modes include TCP Server, TCP Client, UDP Server/Client, Ethernet Modem, and Pair Connection

**Package Checklist**

**DE-311/110V**: 1 NPort Express DE-311 Universal Serial Device Server  
**DE-311/230V**: 1 NPort Express DE-311 Universal Serial Device Server

**Both models include**
- Windows 95/98/ME/NT/2000/XP Real COM driver, Linux real tty driver
- NPort Management Suite software
- User’s Manual, software CD-ROM
- DB9/M – DB9/M adapter

**Optional Accessories**

**DIN rail mounting kit**: For 35 mm DIN rail; includes 4 screws
Front/Top/Rear/Bottom Panel Views

1. DB9 female serial port
2. DIP switches
3. DIN rail screw holes
4. Wall mount screw holes
5. RJ45 10/100BaseTX Ethernet port
6. Reset button—hold down for
   - **3 sec to erase password**
     After 3 sec, the ready LED will flash every twice every second. Release the reset button at this time to erase password.
   - **10 sec to load factory defaults**
     After 10 sec, the ready LED will flash five times each second. Release the reset button at this time to load factory defaults
7. Power input
8. Rubber base pads
9. Technical information
The following topics are covered in this chapter:

- **LED Indicators**
- **Housing**
  - DIN Rail
  - Wall Mount
LED Indicators

The NPort Express’s top panel contains five LED indicators, as described in the following table.

<table>
<thead>
<tr>
<th>LED Name</th>

<td>The NPort Server is ready</td>
</tr>
<tr>
<td></td>
<td>blinking</td>
<td>The NPort is requesting an IP address from the DHCP or BootP server. After receiving the IP, the LED will stop blinking. Note: The LED will also blink while holding down the reset button; see page 1-5 for details.</td>
</tr>
<tr>
<td></td>
<td>off</td>
<td>The NPort Server has malfunctioned</td>
</tr>
</tbody>
</table>

Housing

DIN Rail

The DIN rail attachments provide a very convenient installation option for many industrial applications. Installation instructions are as follows:

**STEP 1:**
Use the screws to attach the DIN rail mounts to the NPort Express’s ears.

**STEP 2:**
The two ends of the rail mount are named A and B. Hook the A end over the top edge of the rail.

**STEP 3:**
Push the unit against the rail. You should hear the B end clicking into place over the bottom edge of the rail.

**NOTE**
The DIN rail-mounting kit is an optional accessory.

To remove the NPort Express from the DIN rail, simply reverse Steps 2 and 3 above. Use your fingers to pull down on the B end, which should release the bracket from the rail.
Wall Mount

Wall installation is another convenient installation option for many industrial applications. Installation instructions are as follows:

**STEP 1:**
Obtain two screws with heads no greater than 6.5 mm in diameter and shafts no greater than 3 mm in diameter. At the desired wall location, drive the screws into the wall with 7.8 cm separation between the screws. Do not drive the screws all the way into the wall; leave about 2 mm clearance.

**STEP 2:**
Hang the NPort Express on the two screws using the apertures on the ears, and then slide the unit downwards.

**STEP 3:**
For added stability, simply tighten the two screws.

To remove the NPort Express from the wall mount, simply reverse Steps 2 and 3.
The following topics are covered in this chapter:

- **DIP Switch Settings**
- **DB9 Female Connector Pinouts**
  - RS-232 Pinouts
  - RS-232 Loopback Tester
  - RS-422/485 Pinouts
  - RS-422 Loopback Tester
  - Mini Adapter
DIP Switch Settings

The top panel contains a table which describes how to configure the serial port using the three DIP switches.

<table>
<thead>
<tr>
<th>SW1</th>
<th>Serial Connection</th>
<th>SW2</th>
<th>SW3</th>
<th>Serial Interface Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>Console (19200,N,8,1)</td>
<td>OFF</td>
<td>OFF</td>
<td>RS-232</td>
</tr>
<tr>
<td>OFF</td>
<td>Data Comm.</td>
<td>OFF</td>
<td>ON</td>
<td>RS-422</td>
</tr>
<tr>
<td></td>
<td></td>
<td>OFF</td>
<td>ON</td>
<td>RS-485 by RTS</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ON</td>
<td></td>
<td>RS-485 ADDC</td>
</tr>
</tbody>
</table>

The DIP switches are located on the rear panel. SW1 toggles the serial port between data and console operation (ON or up for serial console operation, and OFF or down for data communication). Data operation is the normal operating mode for controlling serial devices; console operation is for accessing the NPort Express configuration parameters. Note that after modifying SW1 settings, the NPort Express will reboot to initialize the new mode. You must wait a few seconds for the green Ready LED to blink off and then on again, indicating that the function of the serial port has been changed.

SW2 and SW3 control the serial port’s data communication interface. Note that RTS stands for Ready to Send and ADDC stands for Automatic Data Direction Control.

Keep the following points in mind when setting the DIP switches.

- **RS-232 Console**
  To use the serial port as a console connection, such as when using Moxa PComm Terminal Emulator or HyperTerminal, set SW1 to the ON position.

- **Telnet Connection**
  Some configuration may be carried out through a Telnet connection, during which data is transmitted through the NPort Express’s Ethernet port. However, you must set SW1 to the OFF position to establish a Telnet connection.

Mini Adapter

The NPort Express DE-311 accepts devices with both male and female connectors. A D-shell female serial connector is built-in, and a DB9 male null-modem adapter is included as a standard accessory.

If you want to make your own DB9 male to DB9 male null-modem (or crossover) cable, the correct pinouts are as follows:

<table>
<thead>
<tr>
<th>PIN</th>
<th>RS-232</th>
<th>RS-422</th>
<th>RS-485</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>DCD</td>

</tr>
<tr>
<td>9</td>
<td>---</td>
<td>RTS-(A)</td>
<td>---</td>
</tr>
</tbody>
</table>

**NOTE** The adapter is included with the DE-311 as a standard accessory.
The following topics are covered in this chapter:

- **Connecting to the Ethernet Port**
  - Connecting to a Hub or Switch
  - Connecting to a PC
Connecting to the Ethernet Port

Connecting to a Hub or Switch

For most applications, plug one end of your Ethernet cable into the NPort Express’s 10/100BaseTX port, and the other end into a hub or switch that is connected to your network. In this case, you should use a standard straight-through Ethernet cable, which is readily available from many commercial vendors. You may also make your own cable by referring to the following cable wiring diagram.

Connecting to a PC

If you are connecting the NPort Express directly to your PC’s Ethernet port, use a crossover Ethernet cable. You can make your own crossover cable by referring to the following cable wiring diagram.
The following topics are covered in this chapter:

- Connecting the Power Adapter
- Power Status Check
Connecting the Power Adapter

The following steps explain how to connect the NPort Express’s power adapter:

1. Plug the power adapter’s DC plug into the DC-IN jack on the NPort Express.
2. Plug the power adapter into an electrical outlet.

Note that there is no on/off switch. The NPort Express will turn on automatically as soon as power is supplied. The red PWR LED will glow to indicate that the unit is receiving power.

Power Status Check

Use the PWR LED to verify that the unit is receiving power. A red light indicates that power is being received. If the LED is off, no power is being received. If the unit is plugged in and the PWR LED does not light up, there may be a problem with the unit.
The Telnet console is used to view and modify the unit’s configuration. After installing the unit into a serial device, administrators configure their device remotely by opening a Telnet console session over the network. The following examples refer to a Telnet console session on a Windows 98 host, but the same instructions should apply to all Windows operating systems.

The following topics are covered in this appendix:

- Opening the Telnet Console
- Navigating the Telnet Console
  - Main Menu
  - serverConfig
  - Serialport
  - Monitor
  - Ping
  - Restart
  - Exit
- Menu Tree
Opening the Telnet Console

A Telnet console session may be opened from the Windows Start menu. Select Start → Run... to open a dialog box, and then enter the following:

```
telnet [unit’s IP address]
```

Click OK to begin the Telnet session.

At the prompt, enter "1" for ansi/vt100, and then press Enter.

The main menu of the unit’s Telnet console will appear as shown.

Navigating the Telnet Console

Once the Telnet console has been opened, you may navigate through the console using the following keys:

- **Arrow keys**: Use the arrow keys to navigate between different options. If the arrow keys do not respond, you may need to verify your terminal settings by selecting Preferences in the Terminal menu:
Make sure VT100 Arrows under Terminal Options is enabled (checked), and then click OK to return to the Telnet console.

- **Tab**: You may also use the tab key to navigate between different options in the Telnet console.
- **Enter**: Use the Enter key to select the item that is currently highlighted in the Telnet console. Depending on the item, the Enter key may open a submenu, select a field for modification, or perform an action, depending on the item.
- **Esc**: Use the Esc key to cancel a selection or action and return to the previous menu.
- **Alphanumeric keys**: Alphanumeric keys ("A" to "Z" and "0" to "9") are used when entering certain parameters such as IP address.

After making changes to the unit's configuration in the Telnet console, you will need to save the changes and restart the unit for the new configuration to take effect.

### Main Menu

The main menu displays six categories for configuration: **serverConfig**, **Serialport**, **Monitor**, **Ping**, **Restart**, and **Exit**. Select the desired category and press Enter in order to view and configure the parameters within that category. Each parameter is listed with the parameter name on the left and current setting on the right. Settings that can be modified are displayed in brackets.

### serverConfig

<table>
<thead>
<tr>

Serial Console

The unit supports configuration through the serial console, which is similar to the Telnet console but is accessed through the RS-232 console port rather than through the network. Once you have entered the serial console, the configuration options and instructions are the same as if you were using the Telnet console.

The following instructions and screenshots show how to enter the serial console using PComm Terminal Emulator, which is available free of charge as part of the PComm Lite suite. You may use a different terminal emulator utility, but your actual screens and procedures may vary slightly from the following instructions.

1. Make sure the unit is powered off. Use a serial cable to connect the unit’s serial port to your computer’s male RS-232 serial port.
2. Set the SW1 DIP switch on the rear panel to ON for serial console operation.
3. From the Windows desktop select Start → All Programs → PComm Lite → Terminal Emulator.
4. The PComm Terminal Emulator window should appear. From the Port Manager menu, select Open, or simply click the Open icon as shown below:

5. The Property window opens automatically. Select the Communication Parameter tab, and then select the appropriate COM port for the connection (COM1 in the example below). Configure the parameters for 19200, 8, N, 1 (19200 for Baudrate, 8 for Data Bits, None for Parity, and 1 for Stop Bits).

6. From the Property window’s Terminal tab, select ANSI or VT100 for Terminal Type and click OK.
7. In the PComm window, you will be prompted for the terminal type. Press 1 for ansi/vt100 and then press ENTER. At this point, the console interface will be identical to the Telnet console. Please refer to Appendix A for details on the configuration options that are available.

Console terminal type (1: ansi/vt100, 2: vt52) : 1
Declaration of Conformity

Manufacturer’s Name: Moxa Technologies Co., Ltd.
Manufacturer’s Address: Fl.4, No.135, Lane 235, Pao-Chiao Rd.,
Shing Tien City, Taipei, Taiwan, R.O.C.

declares that the product:
Product Name: NPort Express
Model Number: DE-311

conforms to the following standards:
EMC: FCC Class B
     EN55022:1998 class B
     EN61000-3-2:1995 class B
     EN61000-3-3:1995
     EN55082-1: 1997
     EN61000-4-2:1995
