Driver for NPort S9650I Series (Linux 2.4 & 2.6) Release Notes

Version: v1.19	Build: Build 17110917
Release Date: Nov 20, 2018	

Applicable Products

NPort S9650I Series

Supported Operating Systems

Linux 2.4.x, Linux 2.6.x

New Features

• Add the driver background polling feature to eliminate the waiting time when the NPort does not exist in Slackware 14.0.

Enhancements

• When using the domain name as a mapping address of an NPort, it will be translated every time when the Real TTY is opening the port.
• Compiling errors when using the secured Real COM mode.

Bugs Fixed

• A call trace might occur with the error message "not syncing: Fatal exception" in kernel 2.6.
• The compiling error will occur if the kernel version contains the string "2.4."
• The Real TTY driver's installation and uninstallation fails due to insufficient permissions for the /tmp folder.

Changes

• When the Log file increases without restrictions the file system crashes.
• Does not support 3.x and above.

Notes

N/A
