1. Introduction

MXOMigrationTool provides you with a convenient way to migrate settings from MXview to MXview One.

If you are currently using MXview and want to switch to MXview One, we recommend that you use MXOMigrationTool to migrate your settings, free of charge.

NOTE

Currently, we only support the migration from **MXview v3.2.8 (or later versions)** to **MXview One v1.2.0 (or later versions)**. Refer to the product release note for detailed information on which versions are supported by MXview and MXview One.

Why You Should Migrate

Benefits of Migration

If you are currently an MXview user, we highly recommend that you switch to MXview One to enjoy the following benefits:

1. **Supports new devices:** MXview One supports all the devices supported by MXview, and will also support any new networking devices developed by Moxa in the future.
2. **Supports more add-on modules:** MXview One supports both the MXview Power add-on module and the MXview Wireless add-on module.
3. **Supports new functions:** MXview One can be managed by MXview One Central Manager and will support new functions developed in the future.
4. **Supports more operating systems:** MXview One supports both the Windows and Linux operating systems.

Risks of Not Migrating

If you do not migrate to MXview One, you can still use MXview, but you may encounter the following risks:

1. **MXview only supports existing features**
New functions developed in the future will only be supported by MXview One.
2. **MXview will not support new devices**
New networking devices developed by Moxa in the future will only be supported by MXview One.

User Scenarios

Use the migration operations described below for the version of MXview that you are currently using.

MXview v3.2.8 (or Later Versions) Users

For users of MXview v3.2.8 or later versions, we suggest that you install MXview One on a second computer, and then use MXOMigrationTool to export the backup files from MXview and import them into MXview One. Refer to [MXview v3.2.8 \(or Later Versions\) Users: Use MXOMigrationTool](#) for details.

MXview v3.x to v3.2.6 Users

MXview v3.x to v3.2.6 users can choose one of the following methods to migrate the settings.

- **Method 1: Use MXOMigrationTool**

Upgrade to **MXview v3.2.8** (or later versions) on your current computer, install MXview One on a second computer, and then use **MXOMigrationTool** to export the backup files from MXview and import them into MXview One.

- **Method 2: Install MXview One**

Install MXview One on a second computer and manually configure the settings without using MXOMigrationTool.

Refer to [MXview v3.x to v3.2.6 Users: Use MXOMigrationTool or Install MXview One](#) for details.

MXview v2.x Users

Because MXview v2.x cannot be upgraded to MXview v3.2.8 (or later versions), we suggest that MXview v2.x users install MXview One on a second computer and then manually configure the settings without using MXOMigrationTool. Refer to [MXview v2.x Users: Install MXview One](#) for details.

NOTE

To minimize risks, we recommend using two separate computers during the migration process. Install MXview One on a different computer from MXview, and then uninstall MXview only after confirming that MXview One is functioning properly.

2. What's New in MXview One

Differences between MXview One and MXview

Difference		MXview One	MXview
Add-on Modules	Wireless	✓	See Note
	Power	✓	
OS	Windows	✓	✓
	Linux	✓	
License		<ul style="list-style-type: none">Single node license (Qty: # of devices)Add-on license (Wireless, Power)	<ul style="list-style-type: none">Fixed number of node licenses (Qty: 50, 100, ...)Add-on license (Wireless)
Other Differences		<ul style="list-style-type: none">Supports MXview One Central Manager (multiple site management)Main platform to support Moxa devices	

Note: Currently, MXview supports MXview Wireless v1.0. New versions of MXview Wireless developed in the future may not be supported by MXview.

MXview One Features

- Add-on Module:** MXview One supports both the **MXview Wireless** add-on module and the **MXview Power** add-on module.
- Operating System:** MXview One supports both **Windows** and **Linux**.
- License:** MXview One provides a **single node license** and an **add-on license**. If you are an MXview One user, you can purchase node licenses based on the number of devices you have on your network. To obtain wireless or power related functions, you can also purchase an add-on license to access the MXview Wireless add-on module or MXview Power add-on module.
- Other features:**
 - **Supports MXview One Central Manager**
MXview One supports **MXview One Central Manager**, which is a centralized platform that helps you manage MXview One sites located in different areas.
 - **Main platform to support Moxa devices**
MXview One supports the devices supported by MXview and will also support new networking devices developed by Moxa in the future.

3. Migration Options and Procedures

MXview v3.2.8 (or Later Versions) Users: Use MXOMigrationTool

If you are running **MXview v3.2.8** (or later versions) on your current computer, we suggest that you install MXview One on a second computer, use **MXOMigrationTool** to export the backup files from MXview, and then import them into MXview One.

Preparation

1. Prepare a second computer, separate from the computer running MXview.
2. Perform the following operations on the **second computer**:
 - a. Install **MXview One v1.2.0 (or later versions)**.
 - i. Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - ii. Search for and navigate to the **MXview One** product web page.
 - iii. On the **Resources** tab, download the **MXview One v1.2.0 (or later versions)** software package and start the installation.
 - iv. After completing the installation, you should be able to access the MXview One service.
 - b. Open MXview One and activate either the trial license or an MXview One license that you have already purchased.
 - c. Download **MXOMigrationTool**.
 - i. Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - ii. Search for and navigate to the **MXview** or **MXview One** product web page.
 - iii. On the **Resources** tab, download the version of **MXOMigrationTool** that runs on your MXview One operating system.
 - iv. After completing the download process, you will see a zip folder with MXOMigrationTool inside.

WARNING

MXview and MXview One cannot be installed on the same computer simultaneously due to compatibility issues.

3. Back up events and logs in MXview on your **current computer**:

➤ Job Log:

- i. Navigate to **Menu > Migrations > Maintenance Scheduler** and click the **Show log** (✉) icon.

The screenshot shows the MXview Job Scheduler interface. At the top, there is a header bar with the MXview logo, a site dropdown set to 'LAPTOP-81JBEQ02', a user greeting 'Hi, admin', and a three-dot menu icon. Below the header is a search bar with the placeholder 'Search'. The main area is titled 'Job Scheduler' and contains a table with the following data:

	Job Name	Action	Description	Scheduled Time	Registered Devices
<input type="checkbox"/>	test	Database Backup	test	2023-06-18 PM4:14	0

At the bottom of the table, there are icons for creating a new job (plus sign), editing (pencil), deleting (trash), and viewing details (eye).

- ii. When the **Job Log** window appears, click **Save**.

- iii. MXview will download the job log record as a txt file.

➤ **All Events:**

- i. Navigate to **Menu > Event > All Events** and click the **Export** (CSV) icon.

- ii. Select **Export CSV** to export the event records on this page or select **Export All Events to CSV** to export the event records on all pages.
iii. MXview will export the event records as a csv file.

➤ **Syslog Viewer:**

- i. Navigate to **Menu > Event > Syslog Viewer** and click the **Export** (CSV) icon.

- ii. Select **Export CSV** to export the syslog records on this page or select **Export All Syslog to CSV** to export the syslog records on all pages.
iii. MXview will export the syslog records as a csv file.

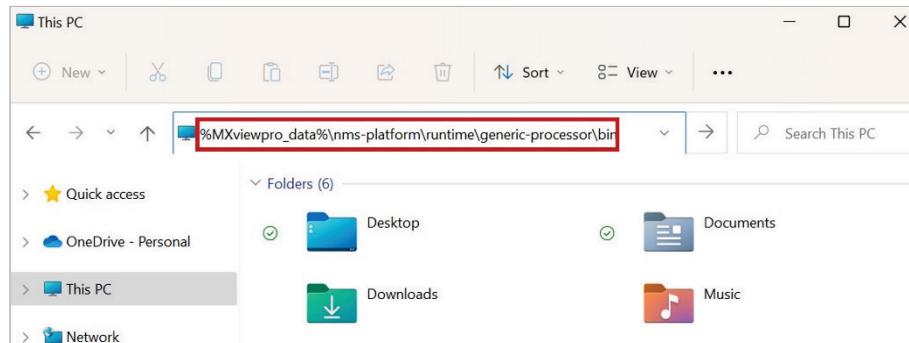

4. Download **MXOMigrationTool** to your **current** computer.

- Open a web browser and visit Moxa's website (<https://www.moxa.com>).
- Search for and navigate to the **MXview** or **MXview One** product web page.
- On the **Resources** tab, download **MXOMigrationTool** for the Windows operating system.
- After completing the download process, you will see a zip folder with MXOMigrationTool inside.

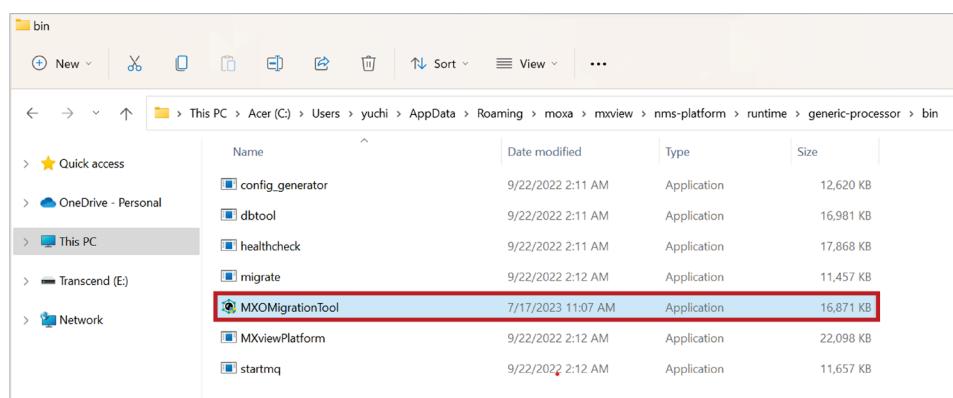

Migration Steps

Step 1: Export backup files from MXview v3.2.8 (or later versions) on your current computer.

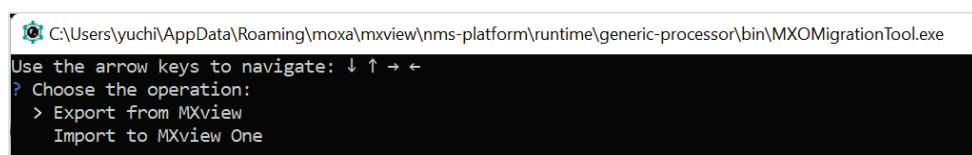

1. Open **File Explorer**. Copy `%MXviewpro_data%\nms-platform\runtime\generic-processor\bin`, paste it into the directory search panel, and then press **Enter** to navigate to the folder.

2. Unzip the MXOMigrationTool zip folder that you downloaded, and then open it.
3. Copy **MXOMigrationTool** from inside the folder and paste it into the folder from **Step 1-1**.

4. Double-click MXOMigrationTool to execute it. Choose **Export from MXview** and then press **Enter**.

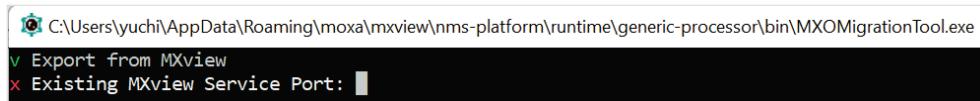

5. Choose **Existing MXview Scheme (http or https)** and press **Enter**.

6. Enter the **Existing MXview Service Port** of the existing MXview scheme you have chosen, and then press **Enter**.

Default port numbers are:

- **http: 80**
- **https: 443**

7. Enter the **Existing MXview Username** (default: **admin**) and press **Enter**.

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
v Existing MXview Username: admin
```

8. Enter the **Existing MXview Password** (default: **moxa**) and press **Enter**.

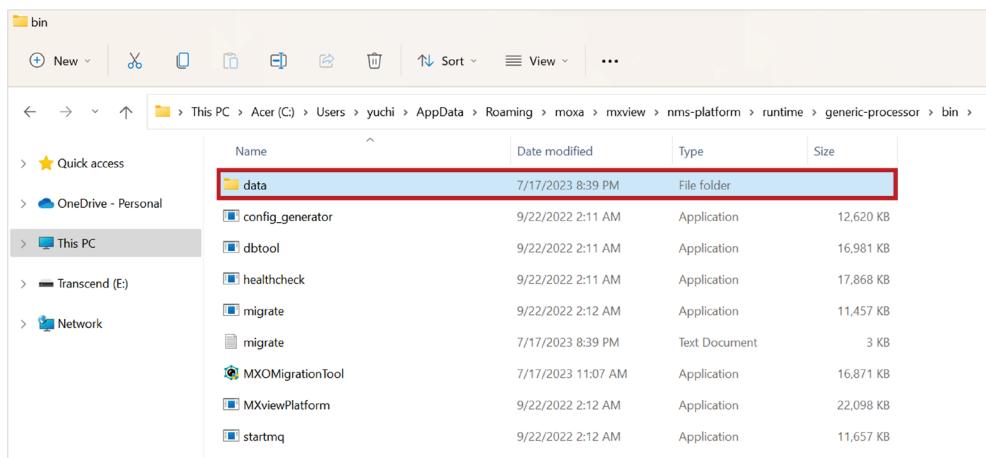

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
v Existing MXview Password: ****
```

9. When the **Confirm** command appears, enter **y** and press **Enter** to export the backup files.

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
Export Scheme: http
Export Port: 80
Export Username: admin
Export Password: moxa
? Confirm? [y/N] y
```

10. Once the backup files have been successfully exported, you will see an '**Export success**' message on the command line, and the backup files will be stored in the **data** folder.

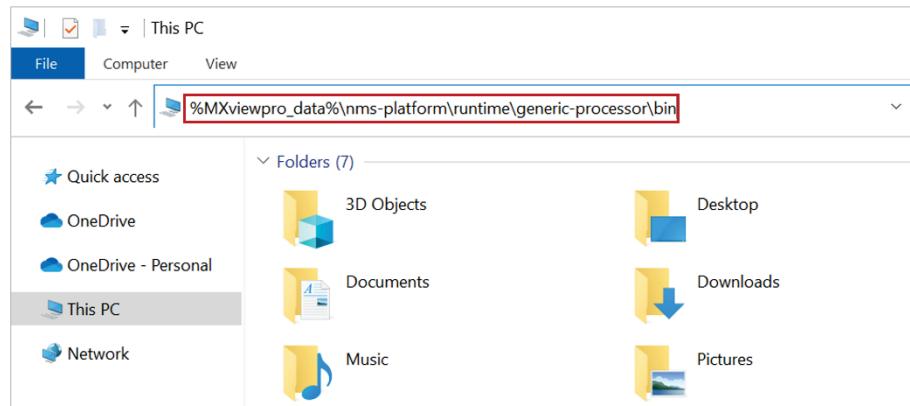

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
Export Scheme: http
Export Port: 80
Export Username: admin
Export Password: moxa

```

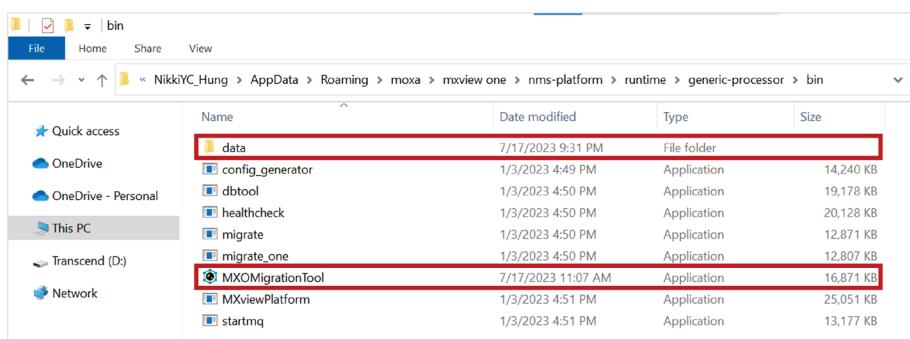

Step 2: Import backup files to MXview One v1.2.0 (or later versions) on the second computer.

[For the Windows version of MXview One]

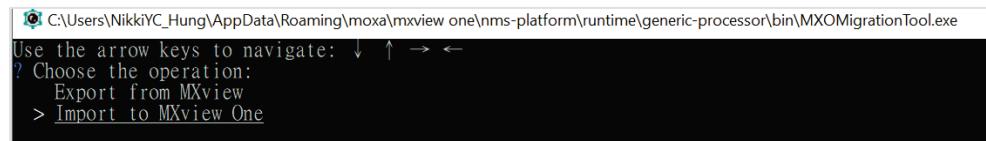

1. Open **File Explorer**. Copy %MXviewpro_data%\nms-platform\runtime\generic-processor\bin, paste it into the directory search panel, and then press **Enter** to navigate to the folder.

2. Unzip the MXOMigrationTool zip folder that you downloaded, and then open it.
3. Copy both **MXOMigrationTool** from inside the folder and the **data** folder exported from **Step 1-10**, and then paste them into the folder from **Step 2-1**.

4. Double-click MXOMigrationTool to execute it. Choose **Import to MXview One** and press **Enter**.

5. Choose **New MXview One Scheme (http or https)** and press **Enter**.

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
Use the arrow keys to navigate: ↓ ↑ → ←
? New MXview One Scheme:
> http
    https
```

6. Enter the **New MXview One Service Port** of the new MXview One scheme you have chosen, and then press **Enter**.

Default port numbers are:

- **http: 80**
- **https:443**

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
x New MXview One Service Port: [ ]
```

7. Enter the **New MXview One Username** (default: **admin**) and then press **Enter**.

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
v New MXview One Username: admin [ ]
```

8. Enter the **New MXview One Password** (default: **moxa**) and then press **Enter**.

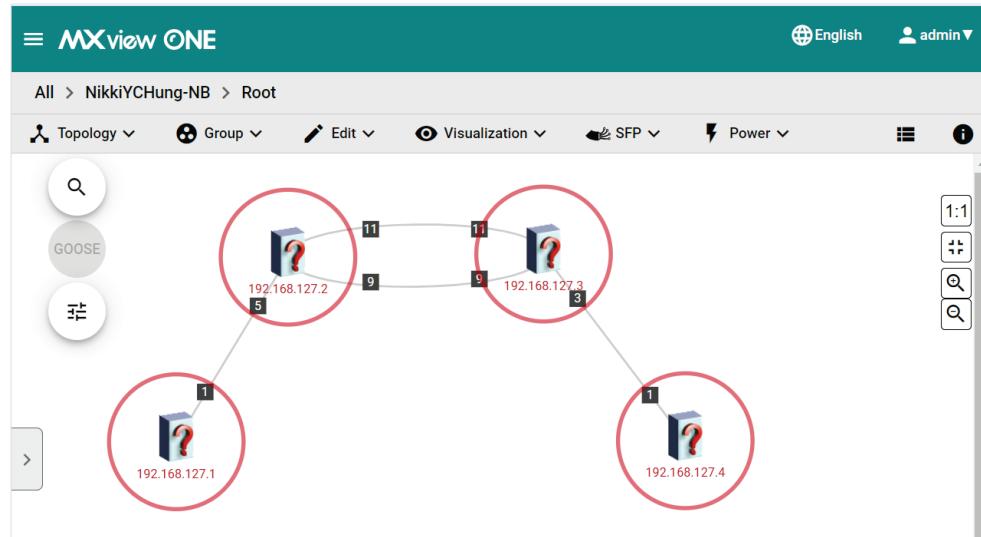

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
v New MXview One Password: **** [ ]
```

9. The **Confirm** command appears. Enter **y** and press **Enter** to import the backup files.

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
Import to MXview One
Import Scheme: http
Import Port: 80
Import Username: admin
Import Password: moxa
Confirm? [y/N] y [ ]
```

10. Once the backup files have been successfully imported, you will see an '**Import success**' message on the command line, and the settings will be displayed in MXview One.

NOTE

Scan Range cannot be migrated from MXview to MXview One via MXOMigrationTool. You will need to manually configure the settings in MXview One to align with MXview.

[For the Linux version of MXview One]

1. Copy these two files and paste them into the `/usr/mxview/generic-processor/bin` directory.
 - **MXOMigrationTool**
Unzip the zip folder that you downloaded and open it to access MXOMigrationTool.
 - **data folder**
The folder exported from **Step 1-10**.
2. Execute **MXOMigrationTool** by executing the following commands sequentially in the Terminal window.
 - `cd /usr/mxview/generic-processor/bin`
 - `./MXOMigrationTool`

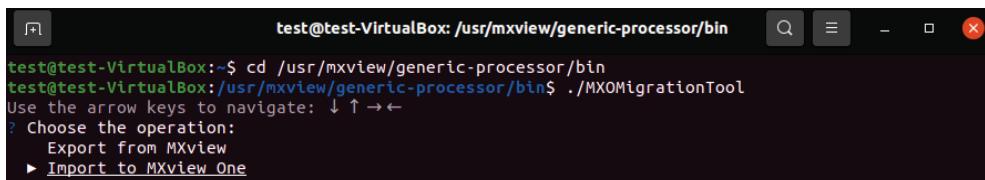

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
```

NOTE

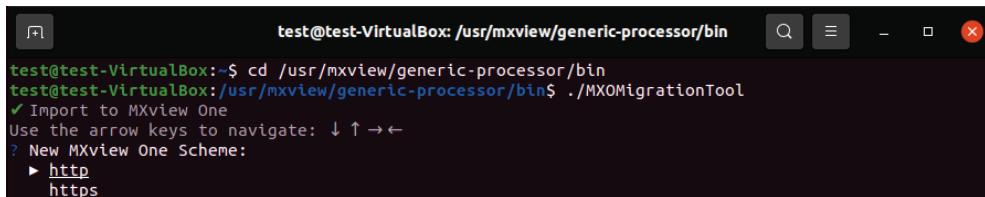

If you do not have permission to execute MXOMigrationTool, please enter the **sudo ./MXOMigrationTool** command into the Terminal to execute it.

3. Choose **Import to MXview One** and then press **Enter**.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
Use the arrow keys to navigate: ↓ ↑ ← →
? Choose the operation:
  Export from MXview
  ▶ Import to MXview One
```

4. Choose **New MXview One Scheme (http or https)** and then press **Enter**.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
✓ Import to MXview One
Use the arrow keys to navigate: ↓ ↑ ← →
? New MXview One Scheme:
  ▶ http
    https
```

5. Enter the **New MXview One Service Port** of the new MXview One scheme you have chosen, and then press **Enter**.

Default port numbers are:

- **http: 80**
- **https: 443**

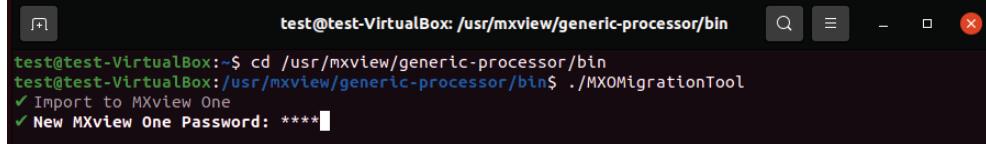

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
✓ Import to MXview One
✗ New MXview One Service Port: █
```

6. Enter the **New MXview One Username** (default: **admin**) and then press **Enter**.

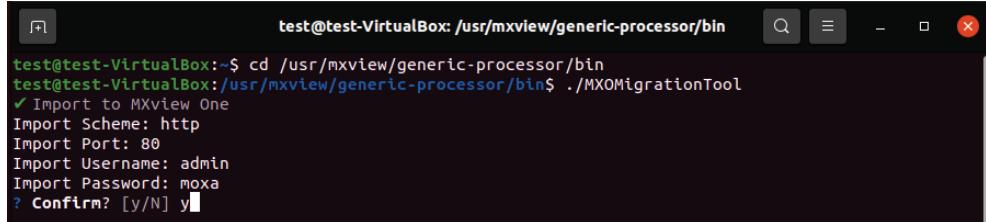

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
✓ Import to MXview One
✓ New MXview One Username: admin
```

7. Enter the **New MXview One Password** (default: **moxa**) and then press **Enter**.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
✓ Import to MXview One
✓ New MXview One Password: ****
```

8. The **Confirm** command appears. Enter **y** and press **Enter** to import the backup files.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
✓ Import to MXview One
Import Scheme: http
Import Port: 80
Import Username: admin
Import Password: moxa
? Confirm? [y/N] y
```

9. Once the backup files have been successfully imported, you will see an '**Import success**' message on the command line and the settings will be displayed in MXview One.

NOTE

Scan Range cannot be migrated from MXview to MXview One via MXOMigrationTool. You will need to manually configure the settings in MXview One to align with MXview.

MXview v3.x to v3.2.6 Users: Use MXOMigrationTool or Install MXview One

If you are running **MXview v3.x to v3.2.6** on your current computer, you can choose one of the following methods to migrate the settings.

Method 1: Use MXOMigrationTool

Preparation

1. Prepare a second computer, separate from the computer running MXview.
2. Perform the following operations on the **second computer**:
 - a. Install **MXview One v1.2.0 (or later versions)**.
 - i. Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - ii. Search for and navigate to the **MXview One** product web page.
 - iii. On the **Resources** tab, download the **MXview One v1.2.0 (or later versions)** software package and start the installation.
 - iv. After completing the installation, you should be able to access the MXview One service.
 - b. Open MXview One and activate the trial license or an MXview One license that you have already purchased.

- c. Download **MXOMigrationTool**.
 - i. Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - ii. Search for and navigate to the **MXview** or **MXview One** product web page.
 - iii. On the **Resources** tab, download the version of **MXOMigrationTool** based on your MXview One operating system.
 - iv. After completing the download process, you will see a zip folder with MXOMigrationTool inside.

WARNING

MXview and MXview One cannot be installed on the same computer simultaneously due to compatibility issues.

3. Upgrade your MXview to **MXview v3.2.8** (or later versions) on your **current computer**:
 - a. Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - b. Search for and navigate to the **MXview** product web page.
 - c. On the **Resources** tab, download the **MXview v3.2.8** (or later versions) software package and start the installation.
 - d. After completing the installation, the settings from MXview v3.x will automatically be stored and displayed in MXview v3.2.8 (or later versions).

NOTE

If you are concerned about potential issues during the upgrade process, we recommend taking one of the following actions to ensure that your current settings and configurations are not lost:

- Back up the database settings in MXview before upgrading to MXview v3.2.8 (or later versions).
- Install MXview One on another computer and manually configure the settings without using MXOMigrationTool. Refer to [Method 2: Install MXview One](#) for details.

4. Back up events and logs in MXview on your **current computer**:

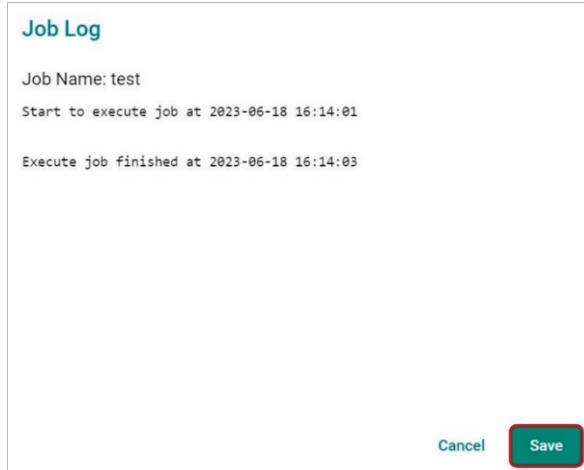

➤ Job Log:

- i. Navigate to **Menu > Migrations > Maintenance Scheduler** and click the **Show log** (✉) icon.

The screenshot shows the MXview interface with the title bar "MXview" and "Site LAPTOP-81JBEJQ2". The main area is titled "Job Scheduler". It features a search bar and a table with the following data:

	Job Name	Action	Description	Scheduled Time	Registered Devices
<input type="checkbox"/>	test	Database Backup	test	2023-06-18 PM4:14	0

- ii. When the **Job Log** window appears, click **Save**.

- iii. MXview will download the job log as a txt file.

➤ **All Events:**

- i. Navigate to **Menu > Event > All Events** and click the **Export** (CSV) icon.

- ii. Select **Export CSV** to export the event records on this page or select **Export All Events to CSV** to export the event records on all pages.
iii. MXview will export the event records as a csv file.

➤ **Syslog Viewer:**

- i. Navigate to **Menu > Event > Syslog Viewer** and click the **Export** (CSV) icon.

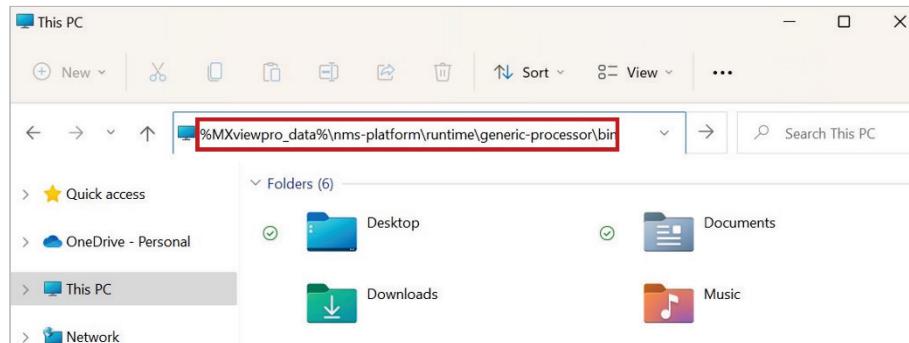

- ii. Select **Export CSV** to export the syslog records on this page or select **Export All Syslog to CSV** to export the syslog records on all pages.
iii. MXview will export the syslog records as a csv file.

5. Download **MXOMigrationTool** to your **current computer**.
- Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - Search for and navigate to the **MXview** or **MXview One** product web page.
 - On the **Resources** tab, download **MXOMigrationTool** for the Windows operating system.
 - After completing the download process, you will see a zip folder with MXOMigrationTool inside.

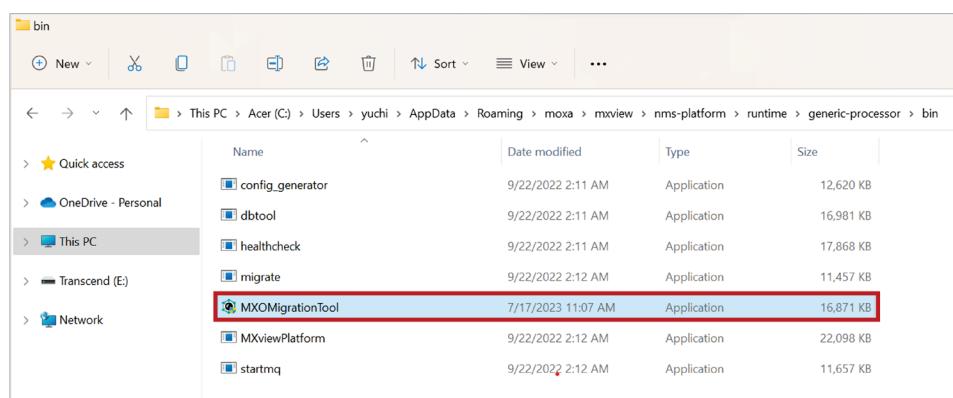

Migration Steps

Step 1: Export backup files from MXview v3.2.8 (or later versions) on your current computer.

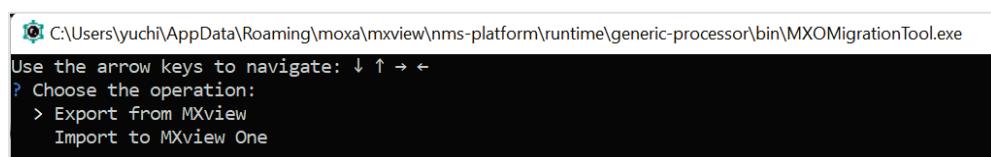

1. Open **File Explorer**. Copy `%MXviewpro_data%\nms-platform\runtime\generic-processor\bin`, paste it into the directory search panel, and then press **Enter** to navigate to the folder.

2. Unzip the MXOMigrationTool zip folder that you downloaded and then open it.
3. Copy MXOMigrationTool inside the folder and paste it into the folder from **Step 1-1**.

4. Double-click MXOMigrationTool to execute it. Choose **Export from MXview** and then press **Enter**.

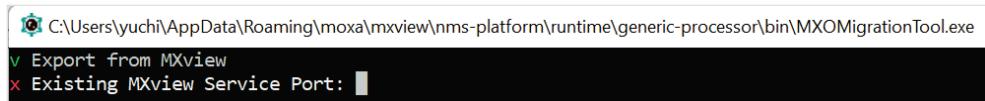

5. Choose **Existing MXview Scheme (http or https)** and then press **Enter**.

6. Enter the **Existing MXview Service Port** of the existing MXview scheme you have chosen, and then press **Enter**.

Default port numbers are:

- > **http: 80**
- > **https: 443**

7. Enter the **Existing MXview Username** (default: **admin**) and then press **Enter**.

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
v Existing MXview Username: admin
```

8. Enter the **Existing MXview Password** (default: **moxa**) and then press **Enter**.

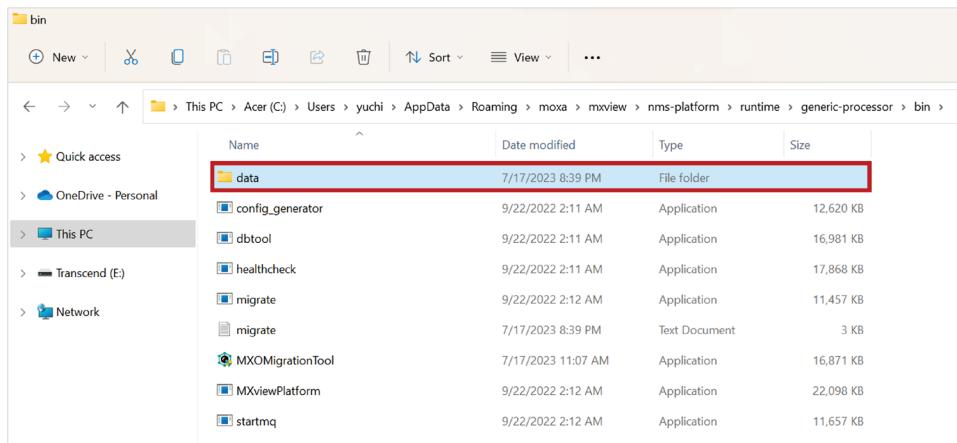

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
v Existing MXview Password: ****
```

9. The **Confirm** command appears. Enter **y** and press **Enter** to export the backup files.

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
Export Scheme: http
Export Port: 80
Export Username: admin
Export Password: moxa
? Confirm? [y/N] y
```

10. Once the backup files have been successfully exported, you will see an '**Export success**' message on the command line, and the backup files will be stored in the **data** folder.

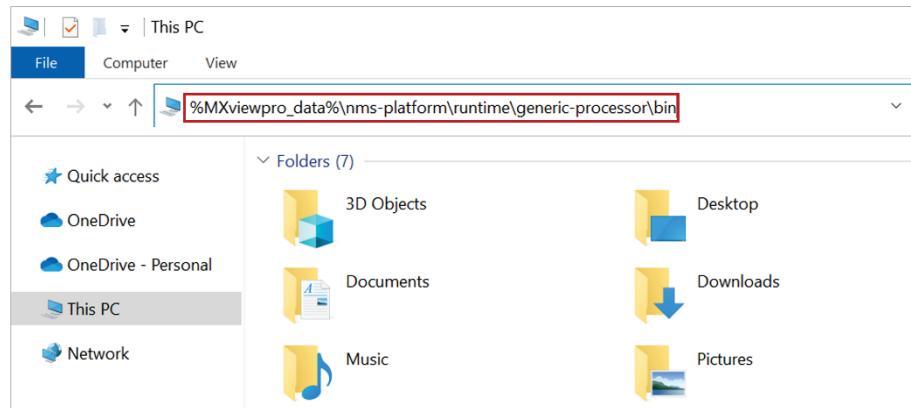

```
C:\Users\yuchi\AppData\Roaming\moxa\mxview\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Export from MXview
Export Scheme: http
Export Port: 80
Export Username: admin
Export Password: moxa

```

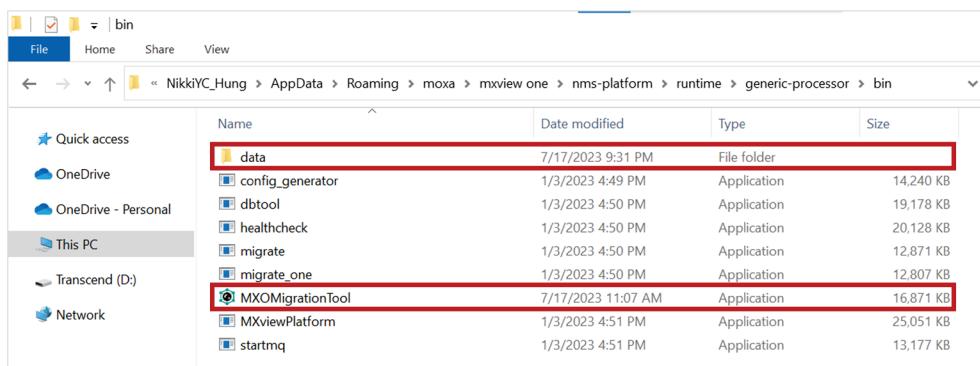

Step 2: Import backup files to MXview One v1.2.0 (or later versions) on the second computer.

[For the Windows version of MXview One]

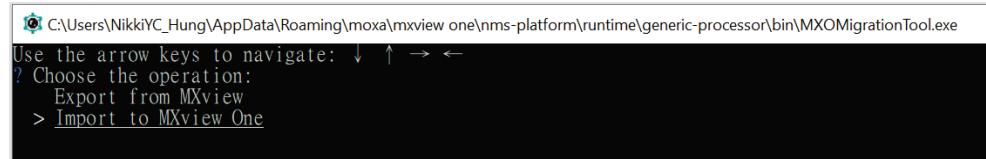

1. Open **File Explorer**. Copy `%MXviewpro_data%\nms-platform\runtime\generic-processor\bin`, paste it into the directory search panel, and then press **Enter** to navigate to the folder.

2. Unzip the MXOMigrationTool zip folder that you downloaded and then open it.
3. Copy both **MXOMigrationTool** from inside the folder and the **data** folder exported from **Step 1-10**, and then paste them into the folder from **Step 2-1**.

4. Double-click **MXOMigrationTool** to execute it. Choose **Import to MXview One** and then press **Enter**.

5. Choose **New MXview One Scheme (http or https)** and then press **Enter**.

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
Use the arrow keys to navigate: ↓ ↑ → ←
? New MXview One Scheme:
> http
    https
```

6. Enter the **New MXview One Service Port** of the new MXview One scheme you have chosen and then press **Enter**.

Default port numbers are:

- **http: 80**
- **https: 443**

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
x New MXview One Service Port: [ ]
```

7. Enter the **New MXview One Username** (default: **admin**) and then press **Enter**.

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
v New MXview One Username: admin [ ]
```

8. Enter the **New MXview One Password** (default: **moxa**) and then press **Enter**.

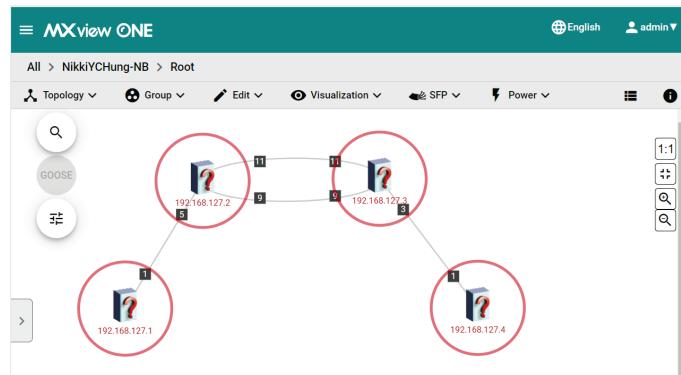

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
v New MXview One Password: **** [ ]
```

9. When the **Confirm** command appears, enter **y** and press **Enter** to import the backup files.

```
C:\Users\NikkiYC_Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
v Import to MXview One
Import Scheme: http
Import Port: 80
Import Username: admin
Import Password: moxa
? Confirm? [y/N] y [ ]
```

10. Once the backup files have been successfully imported, you will see an '**Import success**' message on the command line, and the settings will be displayed in MXview One.

```
C:\Users\NikkiYC Hung\AppData\Roaming\moxa\mxview one\nms-platform\runtime\generic-processor\bin\MXOMigrationTool.exe
Import to MXview One
Import Scheme: http
Import Port: 80
Import Username: admin
Import Password: moxa

NOTE

Scan Range cannot be migrated from MXview to MXview One via MXOMigrationTool. You will need to manually configure the settings in MXview One to align with MXview.

[For the Linux version of MXview One]

- Copy the following two files and paste them into the `/usr/mxview/generic-processor/bin` directory.
 - **MXOMigrationTool**
Unzip the zip folder that you downloaded and then open it to access MXOMigrationTool.
 - **data folder**
The folder that was exported in **Step 1-10**.

- Execute **MXOMigrationTool** by executing the following command lines sequentially in the Terminal window.
 - cd /usr/mxview/generic-processor/bin
 - ./MXOMigrationTool

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
```

NOTE

If you do not have permission to execute MXOMigrationTool, please enter **sudo ./MXOMigrationTool** command in Terminal to execute it.

- Choose **Import to MXview One** and then press **Enter**.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
Use the arrow keys to navigate: ↓ ↑ → ←
? Choose the operation:
  ▶ Export from MXview
  ▶ Import to MXview One
```

- Choose **New MXview One Scheme (http or https)** and then press **Enter**.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
Use the arrow keys to navigate: ↓ ↑ → ←
? New MXview One Scheme:
  ▶ http
  ▶ https
```

- Enter the **New MXview One Service Port** of the new MXview One scheme you have chosen and then press **Enter**.

The default port numbers are:

- **http: 80**
- **https: 443**

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
? Import to MXview One
? New MXview One Service Port: [ ]
```

- Enter the **New MXview One Username** (default: **admin**) and then press **Enter**.

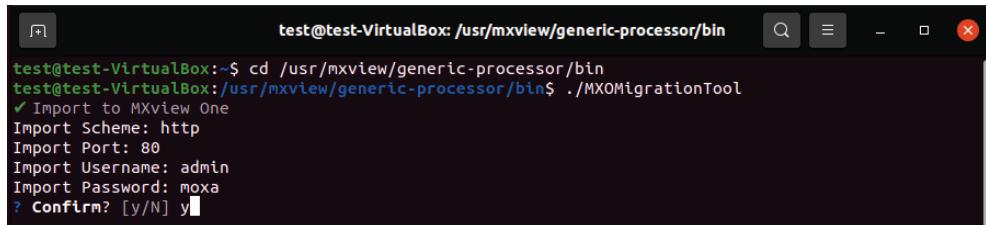

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
? Import to MXview One
? New MXview One Username: admin [ ]
```

7. Enter the **New MXview One Password** (default: **moxa**) and then press **Enter**.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
✓ Import to MXview One
✓ New MXview One Password: ****
```

8. When the **Confirm** command appears, enter **y** and press **Enter** to import the backup files.

```
test@test-VirtualBox:~$ cd /usr/mxview/generic-processor/bin
test@test-VirtualBox:/usr/mxview/generic-processor/bin$ ./MXOMigrationTool
✓ Import to MXview One
Import Scheme: http
Import Port: 80
Import Username: admin
Import Password: moxa
? Confirm? [y/N] y
```

9. Once the backup files have been successfully imported, you will see an '**Import success**' message on the command line and the settings will be displayed in MXview One.

NOTE

Scan Range cannot be migrated from MXview to MXview One via MXOMigrationTool. You will need to manually configure the settings in MXview One to align with MXview.

Method 2: Install MXview One

Preparation

1. Prepare a second computer separate from MXview.
2. Perform the following operations on the **second computer**:
 - a. Install **MXview One v1.2.0 (or later versions)**.
 - i. Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - ii. Search for and navigate to the **MXview One** product web page.
 - iii. On the **Resources** tab, download the **MXview One v1.2.0 (or later versions)** software package and then start the installation.
 - iv. After completing the installation, you should be able to access the MXview One service.
 - b. Open MXview One and activate the trial license or an MXview One license that you have already purchased.

WARNING

MXview and MXview One cannot be installed on the same computer simultaneously due to compatibility issues.

3. Back up events and logs in MXview on your **current computer**:

➤ **Job Log:**

- Navigate to **Menu > Migrations > Maintenance Scheduler** and then click the **Show log** (📄) icon.

The screenshot shows the MXview interface with the title 'Job Scheduler'. At the top right, it says 'Hi, admin'. Below the title is a search bar labeled 'Search'. A table lists one job entry:

	Job Name	Action	Description	Scheduled Time	Registered Devices
<input type="checkbox"/>	test	Database Backup	test	2023-06-18 PM4:14	0

- When the **Job Log** window appears, click **Save**.

The screenshot shows the 'Job Log' window. It displays the following information for a job named 'test':

- Job Name: test
- Start to execute job at 2023-06-18 16:14:01
- Execute job finished at 2023-06-18 16:14:03

At the bottom right are two buttons: 'Cancel' and a green 'Save' button.

- MXview will download the job log as a txt file.

➤ **All Events:**

- Navigate to **Menu > Event > All Events** and then click the **Export** (📤) icon.

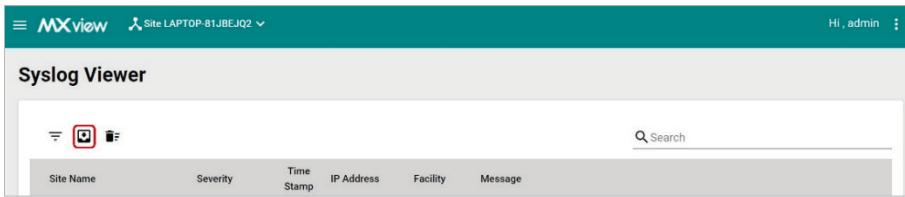

The screenshot shows the 'All Events' page. At the top right, it says 'Hi, admin'. Below the title is a search bar. A table lists one event record:

	Site Name	ID	Source	Source IP	Device Alias	Description	Time Issued
<input type="checkbox"/>	Site LAPTOP-81JBEJQ2	4	MXview	0.0.0.0		Job: test is done	2023-06-18 16:14:03

- Select **Export CSV** to export the event records on this page or select **Export All Events to CSV** to export the event records on all pages.
- MXview will export the event records as a csv file.

➤ **Syslog Viewer:**

- i. Navigate to **Menu > Event > Syslog Viewer** and then click the **Export** (CSV) icon.

- ii. Select **Export CSV** to export the syslog records on this page or select **Export All Syslog to CSV** to export the syslog records on all pages.
- iii. MXview will export the syslog records as a csv file.

Migration Steps

- Step 1:** On the second computer, open the function page in MXview One and manually configure the settings to align with MXview.
- Step 2:** Repeat **Step 1** until you have completed the manual configuration of all the functions you want to migrate.
- Step 3:** After ensuring that MXview One is functioning properly without any issues, you can choose to uninstall MXview.

MXview v2.x Users: Install MXview One

Since MXview v2.x cannot be upgraded to MXview v3.2.8 (or later versions), if you are running **MXview v2.x** on your current computer, we suggest that you install MXview One on a second computer and manually configure the settings.

Preparation

1. Prepare a second computer separate from MXview.
2. Perform the following operations on the **second computer**:
 - a. Install **MXview One v1.2.0 (or later versions)**.
 - i. Open a web browser and visit Moxa's website (<https://www.moxa.com>).
 - ii. Search for and navigate to the **MXview One** product web page.
 - iii. On the **Resources** tab, download the version of **MXview One v1.2.0 (or later versions)** software package that runs on your operating system and then start the installation.
 - iv. After completing the installation, you should be able to access the MXview One service.
 - b. Open MXview One and activate the trial license or an MXview One license that you have already purchased.

WARNING

MXview and MXview One cannot be installed on the same computer simultaneously due to compatibility issues.

3. Backup events and logs in MXview on your **current computer**:

➤ **Job Log:**

- Navigate to **Menu > Migrations > Maintenance Scheduler** and then click the **Show log** (📄) icon.

The screenshot shows the MXview interface with the title 'Job Scheduler'. At the top, there is a search bar labeled 'Search'. Below it is a table with columns: Job Name, Action, Description, Scheduled Time, and Registered Devices. A single row is visible for a job named 'test'.

	Job Name	Action	Description	Scheduled Time	Registered Devices
<input type="checkbox"/>	test	Database Backup	test	2023-06-18 PM4:14	0

- When the **Job Log** window appears, click **Save**.

The screenshot shows the 'Job Log' window. It displays the following information for a job named 'test':

- Job Name: test
- Start to execute job at 2023-06-18 16:14:01
- Execute job finished at 2023-06-18 16:14:03

At the bottom right, there are 'Cancel' and 'Save' buttons, with 'Save' being highlighted.

- MXview will download the job log as a txt file.

➤ **All Events:**

- Navigate to **Menu > Event > All Events** and then click the **Export** (📤) icon.

The screenshot shows the 'All Events' window. It displays a single event record:

	Site Name	ID	Source	Source IP	Device Alias	Description	Time Issued
<input type="checkbox"/>	Site LAPTOP-81JBEJQ2	4	MXview	0.0.0.0		Job: test is done	2023-06-18 16:14:03

- Select **Export CSV** to export the event records on this page or select **Export All Events to CSV** to export the event records on all pages.
- MXview will export the event records as a csv file.

➤ **Syslog Viewer:**

- Navigate to **Menu > Event > Syslog Viewer** and then click the **Export** (📤) icon.

The screenshot shows the 'Syslog Viewer' window. It has a table header with columns: Site Name, Severity, Time Stamp, IP Address, Facility, and Message.

Site Name	Severity	Time Stamp	IP Address	Facility	Message
-----------	----------	------------	------------	----------	---------

- ii. Select **Export CSV** to export the syslog records on this page or select **Export All Syslog to CSV** to export the syslog records on all pages.
- iii. MXview will export the syslog records as a csv file.

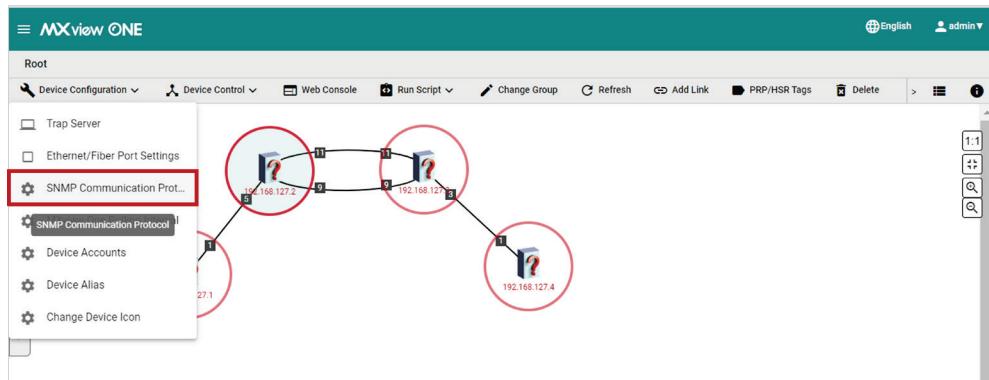

Migration Steps

- Step 1:** On the second computer, open the function page in MXview One and manually configure the settings to align with MXview.
- Step 2:** Repeat **Step 1** until you have completed the manual configuration of all functions that you want to migrate.
- Step 3:** After ensuring that MXview One is functioning properly without any issues, you can choose to uninstall MXview.

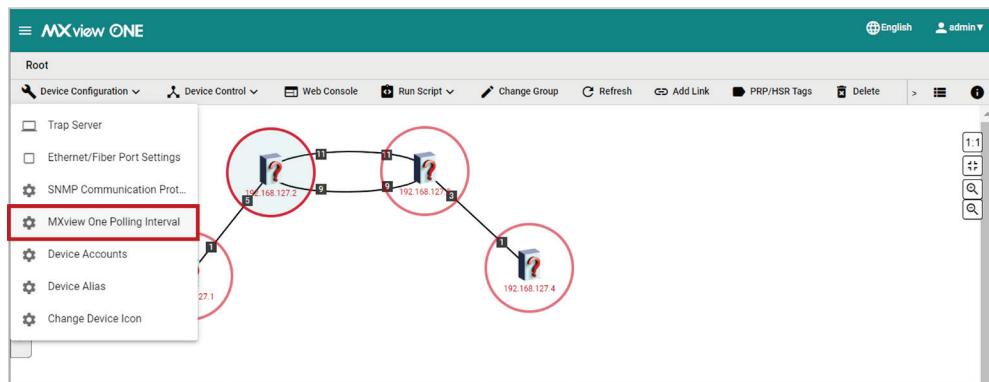

Items to Check After Migration

If you want to verify whether the function settings have been successfully transferred from MXview to MXview One, you can open the corresponding function pages of the following items in both MXview and MXview One and check the consistency of the configuration values.

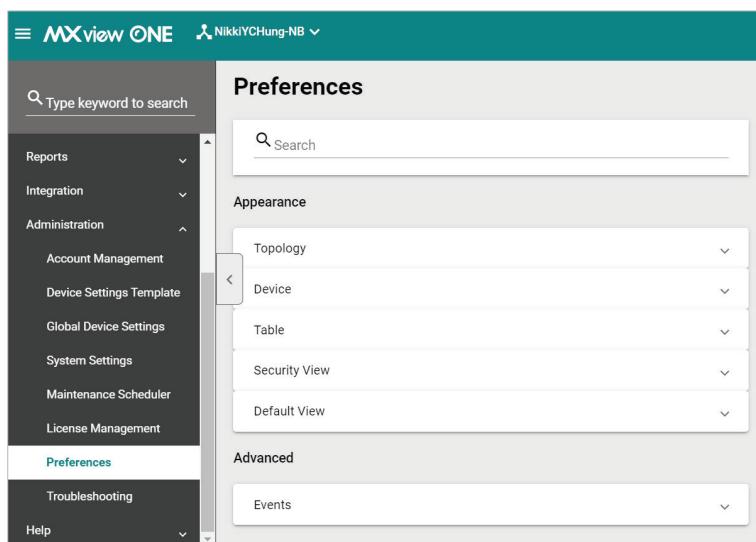

- **Number of devices** displayed in the Topology.
- **Link connection** between each device displayed in the Topology.
- **SNMP settings** in each device.

- **Polling interval settings.**

- **Preference settings** (e.g., Link color, Button label, Device icon, Device alias).

4. Migration Scopes and Limitations

Migration Scopes

The function settings that can and cannot be migrated are listed in the following table.
(✓ means the settings can be migrated.)

Main Function	Sub Function	Features	Migration
Topology	Group	The relationship between each group	✓
		Group Icon	✓
	Device	The relationship between a device and its group	✓
		SNMP Settings	✓
		Polling Settings	✓
		Advanced Settings	✓
		Device Alias	✓
		Device Icon	✓
	Link	Severity Threshold	✓
		Packet Error Rate	✓
		SFP Threshold	✓
		Port Label	✓

- Note 1:** To preserve event and log records that cannot be migrated, we recommend that you export the settings as a backup file in MXview. However, please be aware that these backup files cannot be reimported into the system.
- Note 2:** If the OID was added via OID import manager, it can also be migrated to MXview One but will be unable to function properly.
- Note 3:** For security and privacy concerns, we do not assist with password migrations. MXOMigrationTool will randomly generate a new password for each account. You should reset all of these passwords manually. Refer to the User Password section for details.
- Note 4:** We suggest that you manually configure the settings in MXview One.

Migration Limitations

Version Requirement

Currently, we only support migration from **MXview v3.2.8 (or later versions)** to **MXview One v1.2.0 (or later versions)**. Refer to the product release notes for detailed information on which versions are supported by MXview and MXview One.

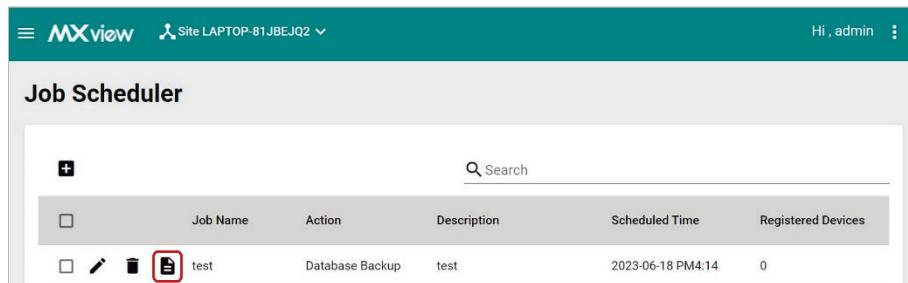

Licenses

Licenses for MXview cannot be transferred or used with MXview One. Be sure to purchase an MXview One license once you have decided to access our MXview One service.

Function Settings Migration

For function settings that cannot be migrated, we recommend the following solutions:

- **Job Log:** Export the data as a **TXT** file.
 - a. Open MXview and navigate to **Menu > Migrations > Maintenance Scheduler** and then click the **Show log (📄)** icon.

The screenshot shows the MXview interface with the title 'Job Scheduler'. It displays a table with one row of data:

	Job Name	Action	Description	Scheduled Time	Registered Devices
<input type="checkbox"/>	test	Database Backup	test	2023-06-18 PM4:14	0

- b. When the **Job Log** window appears, click **Save**.

The screenshot shows the 'Job Log' window with the following details:
Job Name: test
Start to execute job at 2023-06-18 16:14:01
Execute job finished at 2023-06-18 16:14:03

At the bottom right, there are two buttons: 'Cancel' and 'Save' (which is highlighted with a red box).

- c. MXview will download the job log as a txt file.

- **All Events:** Export the data as a **CSV** file.

- a. Open MXview and navigate to **Menu > Event > All Events**, and then click the **Export** (CSV) icon.

The screenshot shows the MXview interface with the title bar "MXview Site LAPTOP-81JBEJQ2". The main area is titled "All Events". A table displays one event record:

Site Name	ID	Source	Source IP	Device Alias	Description	Time Issued
Site LAPTOP-81JBEJQ2	4	MXview	0.0.0.0		Job: test is done	2023-06-18 16:14:03

- b. Select **Export CSV** to export the event records on this page or select **Export All Events to CSV** to export the event records on all pages.
 - c. MXview will export the event records as a csv file.
- **Syslog Viewer:** Export the data as a **CSV** file.

- a. Open MXview and navigate to **Menu > Event > Syslog Viewer**, and then click the **Export** (CSV) icon.

The screenshot shows the MXview interface with the title bar "MXview Site LAPTOP-81JBEJQ2". The main area is titled "Syslog Viewer". It features a search bar labeled "Search" and a set of filters for "Site Name", "Severity", "Time Stamp", "IP Address", "Facility", and "Message".

- b. Select **Export CSV** to export the syslog records on this page or select **Export All Syslog to CSV** to export the syslog records on all pages.
 - c. MXview will export the syslog records as a csv file.
- **Scan Range:** We suggest that you manually configure the settings in MXview One to align with MXview.

- a. Open **MXview** on your current computer and then navigate to **Menu > Network > Scan Range** to view the scan range settings.

The screenshot shows the "Scan Range Wizard" with step 1: "Network Range(s)". It displays a table with one entry:

	Enabled/Disabled	Name	First IP Address	Last IP Address	Group	Site Name
<input checked="" type="checkbox"/>	Enabled	1	10.80.90.1	10.80.97.223	Root	Site DESKTOP-TUTNU4T

Below the table, it says "1 - 1 of 1". At the bottom is a "Next" button.

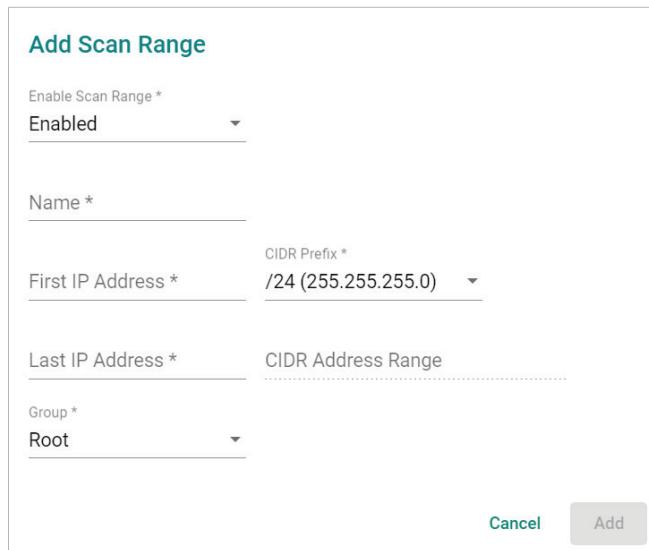

- b. Open **MXview One** on the second computer and navigate to **Menu > Device Discovery**.

The screenshot shows the "Device Discovery" screen with step 1: "Network Range(s)". It displays a table with one entry:

	Enabled/Disabled	Name	First IP Address	Last IP Address	Group	Site Name
<input checked="" type="checkbox"/>	Enabled	1	10.80.90.1	10.80.97.223	Root	Site DESKTOP-TUTNU4T

Below the table, it says "0 of 0". At the bottom is a "Next" button.

- c. In **MXview One**, click the **Add** (+) icon. The **Add Scan Range** window will appear.

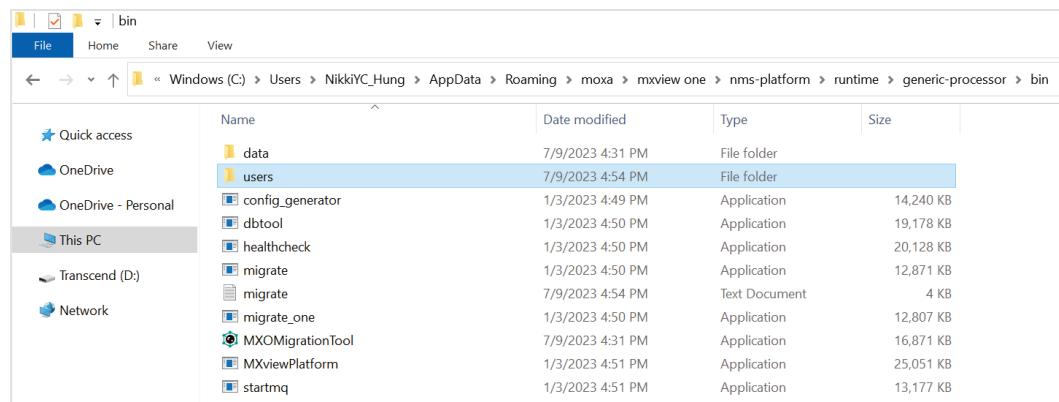

- d. Configure the settings to align with the values in MXview.

User Password

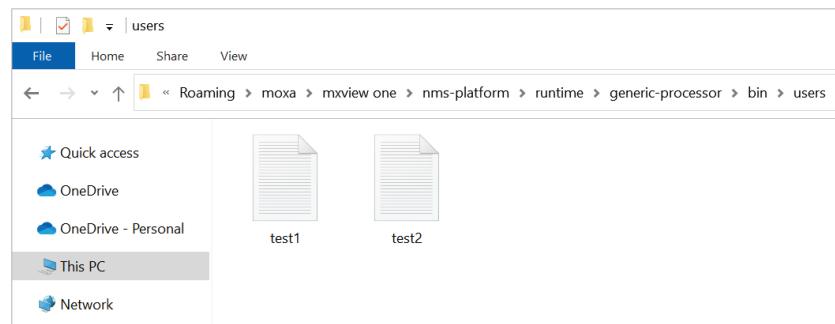

For security and privacy concerns, we do not assist with password migrations. MXOMigrationTool will randomly generate a new password for each account that you can reset. Refer to the following steps to reset the passwords:

Step 1: After importing the backup files to MXview One, view the following **users** folder specific to your computer's operation system.

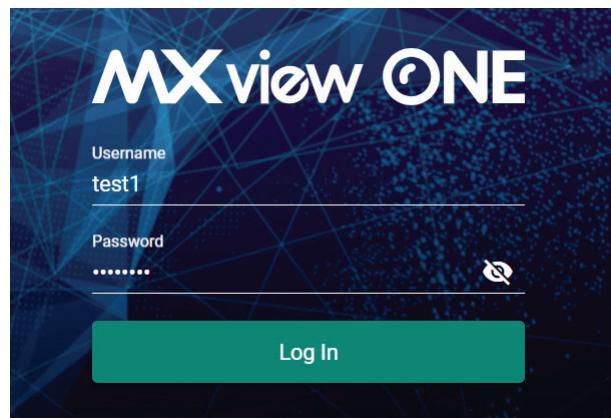

- Windows: %MXviewpro_data%\nms-platform\rtim\generic-processor\bin
- Linux: /usr/mxview/generic-processor/bin

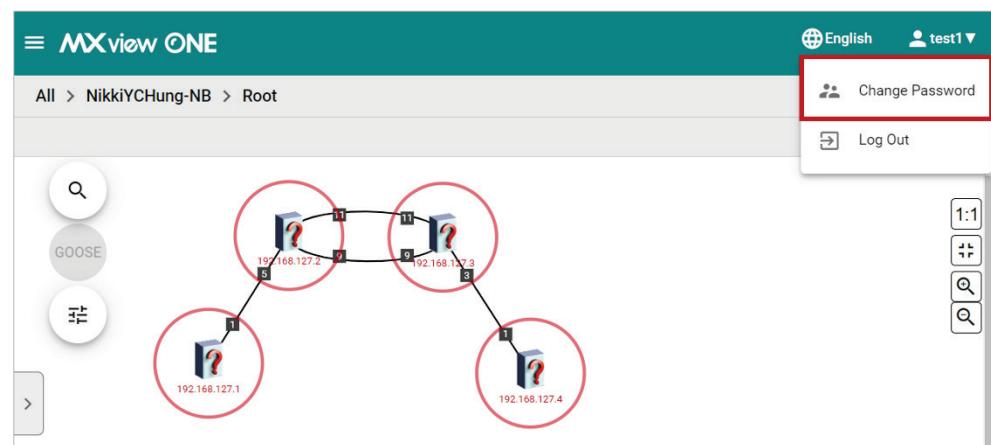

Step 2: Open the **users** folder. You will see TXT files that hold randomly generated new passwords for each account.

- Step 3:** Send the new passwords to the corresponding users.
- Step 4:** Once users receive the new password for their account, they can choose to reset the password.
- Step 5:** To reset the password, log in to MXview One with the username and new password.

- Step 6:** Click **Change Password** in the top-right list.

- Step 7:** When the **Change Password** window appears, specify a new password.

The image shows the "Change Password" dialog box. It has two input fields: "Old Password *" and "Password *". Both fields have a character count indicator "0 / 16" and a visibility icon. At the bottom are "Cancel" and "Apply" buttons.

- Step 8:** Click **Apply** to reset the password.

5. Troubleshooting

This chapter describes how to solve problems that you might encounter while using MXOMigrationTool.

Export Backup Files Failure

If you fail to export backup files from MXview on your current computer, please export the backup files again.

Import Backup Files Failure

If you fail to import backup files to MXview One on the new computer, take the following steps:

- Step 1:** Uninstall MXview One on the new computer.
- Step 2:** Reinstall MXview One on the new computer.
- Step 3:** Import the backup files again.
